```
# 1. Import libraries
import pandas as pd
import matplotlib.pyplot as plt

# 2. Create a simple dataset
data = {
    "Student": ["Aman", "Riya", "Rahul", "Priya", "Karan"],
    "Marks": [70, 85, 60, 90, 75]
}

df = pd.DataFrame(data)

# 3. Display the dataset
print("Student Dataset:")
print(df)

# 4. Analyze the data
print("\nAverage Marks:", df["Marks"].mean())
print("Highest Marks:", df["Marks"].max())
print("Lowest Marks:", df["Marks"].min())

# 5. Create a bar chart
plt.bar(df["Student"], df["Marks"])
plt.title("Student Marks Analysis")
plt.xlabel("Students")
```

```
plt.ylabel("Marks")
plt.show()

# 6. Show findings
print("\nFindings:")
print("Highest scoring student:", df.loc[df["Marks"].idxmax(), "Student"])
print("Lowest scoring student:", df.loc[df["Marks"].idxmin(), "Student"])
```
